DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Auerbach et al., USPN 5,673,316.

With regard to claims 1 and 7, Auerbach discloses an integrated circuit for the authentication of a consumable storage device (secure cryptographic envelope) by an apparatus (column 1 lines 39-44), the integrated circuit including a memory space which contains encrypted data defined by a MAC applied to data (column 4 lines 25-35) relating to a consumable stored by the device (column 4 lines 9-18), the MAC being constructed of an asymmetric cryptographic function whereby a public key of the apparatus is used to decrypt an encrypted random number generated by another integrated circuit of the apparatus (column 5 lines 19-43) and a secret key of the apparatus is used to decrypt encrypted data stored in the memory space (column 10 lines 50-64).

With regard to claim 2, Auerbach discloses the circuit of claim 1 as outlined above, and further discloses the function is a hash function (column 5 lines 19-35).

With regard to claim 3, Auerbach discloses the circuit of claim 2 as outlined above, and further discloses the hash function is MD5 (column 5 lines 19-20).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Auerbach in view of examiner's official notice.

With regard to claims 4, Auerbach discloses the circuit of claim 2 as outlined above, and mentions using secure hash algorithms, but does not specify SHA-1 (column 5 lines 29-31). The examiner takes official notice that SHA-1 is a well known secure hash function. It would have been obvious for one of ordinary skill in the art to use SHA-1 as the "other secure hash" of Auerbach for the motivation of increased security.

With regard to claim 5, Auerbach in view of examiner's official notice discloses the circuit of claim 4 as outlined above, and further discloses using temporary registers and rotating counters (column 6 lines 20-27).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JACOB LIPMAN whose telephone number is (571)272-3837. The examiner can normally be reached on M-Fr.
